B2B Go-to-Market Strategy for Découvre Bitcoin

Plan B Academy · Bitcoin Business Track · Manuel Proquin · April 2026

15-page strategic research report. Each section links to a detailed companion file in this repository. Full methodology, glossary, interview index and market sizing available in the companion files below.

---

0 · The Claim

> Across France's 130,000+ registered training providers, **none teaches Bitcoin to notaires and chartered accountants in their professional practice**. Découvre Bitcoin can own this whitespace in 12 months.

Three anchor figures

#	Anchor figure	Short qualifier
1	**130,000+ training providers in France · 0 dedicated to Bitcoin for notaires and chartered accountants**	Source : Mon Compte Formation / DGEFP 2025 · 133,764 providers registered
2	**2 priority segments · 8 in-person expert interviews**	Field interviews conducted 07/04 – 14/04/2026
3	**150 – 350 professionals trained over 12 months**	100 – 200 notaires + 50 – 150 chartered accountants · nominal scenario

Diagnosis — what fieldwork revealed

Field interviews reshuffled the segment ranking derived from desk research :

- **Notaires** — moved from middle-right to top-right. Accessibility confirmed stronger than anticipated : 5 out of 17,000 are autonomous on Bitcoin cases, yet the institutional channel INFN / INAFON is proven responsive.
- **Chartered accountants** — consolidated top-right. Autonomous decision, Bitcoin-only endorsed as « the natural entry point to crypto-assets » (Julien Oréal).
- **CGP / wealth advisors** — collapsed to middle-left. Commission-based revenue model blocks Bitcoin interest : « the hardest target there is » (Louis-Alexandre de Froissard).
- **PSAN / crypto-asset service providers** — invalidated to bottom-left. No external training market ; firms self-drafted Art. 81 procedures with lawyers.
- **Banks** — not short-term ready. Bitcoin in Phase 3 of their digital-assets roadmap, horizon 2 – 3 years.

Detail, scores and rebuttal in What Fieldwork Revealed.

Recommendation — the 12-month path

Five blocks compose the recommendation :

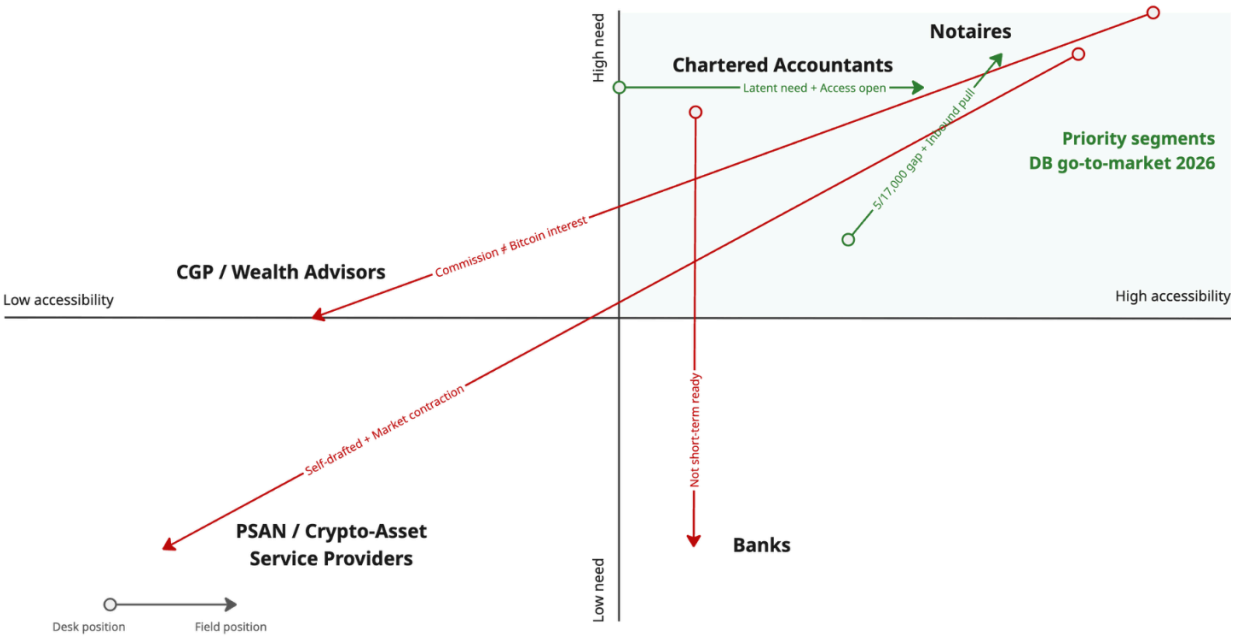
- **Bitcoin-only depth** — the reference module, not a generalist crypto catalog.
- **2 priority segments** — notaires + chartered accountants.
- **3 P0 partners** — 4NK Academy (Qualiopi + RNCP) · Le Coffre (native Bitcoin product anchoring) · Gwendal Texier / INAN (notarial practitioner network).

- **4 acquisition channels** — national institutional · regional chambers · professional press · direct firm outreach.
- **150 – 350 professionals trained** — under nominal scenario, with OPCO ATLAS financing via the Qualiopi partner.

Detailed plan, gates, partners and pricing in The 12-Month Path.

Diagnosis — segment ranking reshaped by fieldwork

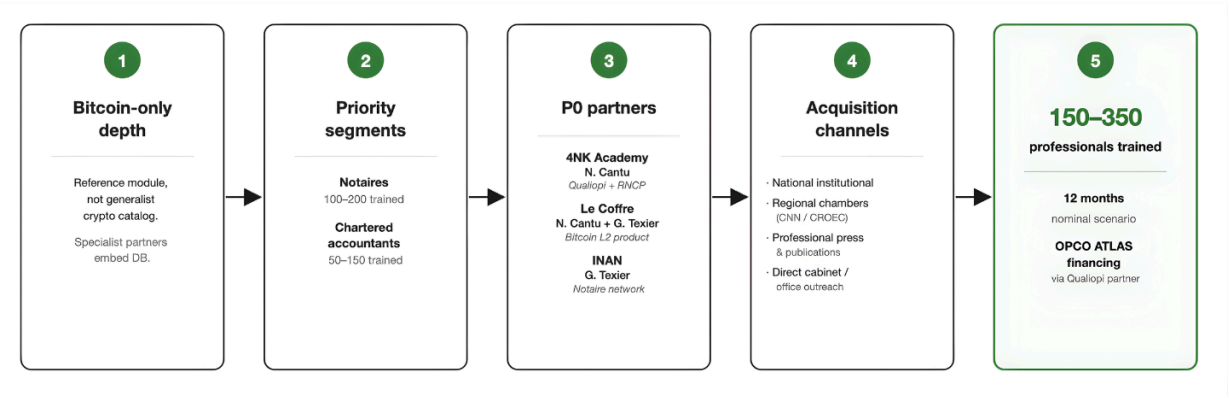
What the terrain flipped — need intensity vs accessibility



8 in-person interviews, April 2026. Desk research preceded all field contact.

Recommendation — 12-month GTM sequencing

The 12-month path — Découvre Bitcoin go-to-market



Nominal scenario probability 40–50% (C3 §14.7). Four gates monitored at T+3.

A · Market state before the terrain

Segment-first methodology. Découvre Bitcoin's client, Murielle Macadam, defined the B2B scope broadly : « institutions, schools, governments, and individuals with professional objectives ». These are buyer types and channels — not market segments. A market segment is defined by a shared professional problem. A notarial school is a channel to reach the **Notaires** segment, not a segment itself. We prioritize segment selection over channel optimization because value proposition, pricing and sales cycle vary by segment, not by organisation type. Practising professionals were prioritised over students : their problem exists today, they have established financing (OPCO ATLAS, PDC, FIFPL), and their decision cycle is shorter.

Regulatory context. Four regulatory pillars shape potential demand :

- **MiCA** (Regulation (EU) 2023/1114) — imposes a « fit and proper » competence regime on crypto-asset service providers via Art. 81 (ESMA Guidelines 11/07/2025 : 80 h initial + 10-15 h CPD/yr).
- **DAC8** (Directive (EU) 2023/2225, in force since 01/01/2026) — mandates annual crypto-transaction reporting by intermediaries, first filing 2027.
- **ANC 2026-01** (published 09/01/2026, mandatory from accounting years opening 01/01/2027) — first comprehensive French crypto-accounting standard.
- **Continuing-education obligations** — French notaires 20 h/yr (Decree 2011-1230) · chartered accountants 120 h / 3 yr DPC.

No mapped training provider addresses DAC8 frontally as of April 2026.

Training financing. France registered **133,764 training providers** in 2025 (Mon Compte Formation / DGEFP) — none dedicated to Bitcoin for notaires and chartered accountants. Qualiopi certification is the access key : without it, no OPCO, FIFPL, AGEFICE or CPF funding is accessible. Relevant finance channels for the target segments :

- **OPCO ATLAS PDC TPE** — up to €20,000 per trainee, requires a Qualiopi partner.
- **Own cabinet budget** — direct sale, no condition.
- **FIFPL** — liberal professionals, cap €900/yr, requires Qualiopi.
- **AGEFICE** — TNS managers, €900–2,100/training, requires Qualiopi.

CPF is out of scope for B2B professional finance training : 5–10 % of sales at best (Murielle Macadam confirmed), administrative burden disproportionate (Nicolas Cantu).

Six segments scored desk — pre-field (8 criteria / 40 points). Four mission criteria : M1 size, M2 training-need intensity, M3 accessibility, M4 funding mechanisms. Four complementary : C1 MiCA urgency, C2 end-client demand, C3 contract value, C4 DB Bitcoin-only alignment. Desk Top 5 *before field research* — subsequently revised in Part B :

Pre-field rank	Segment	Score	Rationale
1	CGP / CGPI	33/40	7 h/yr AMF obligation + MiCA urgency sub-segment + growing Bitcoin-client portfolio
2	Notaires	30/40	Inheritance obligation · 12 % of French adults hold crypto · documented professional risk
3	PSAN / CASP	29/40	Art. 81 MiCA deadline 01/07/2026 · only segment with direct regulatory obligation
4	Bank employees	28/40	373,600 salaries · OPCO ATLAS · MiCA pressure via NCA notification
5	Chartered accountants	27/40	Mandatory crypto reporting by clients · 2025 third-party-certifier accreditation · ~22,685 addressable via OEC

Family offices (25/40) sat below the desk Top 5 ; lawyers were not formally scored. Both lack Phase-A field data.

Bitcoin literacy — universally low, heterogeneous by autonomy. Triangulating eight field interviews with public statistical baselines (no corps professionnel publishes granular data on profession × Bitcoin competence), the study retains qualitative codes rather than fabricated scores. Population anchor : 12 % of French adults hold crypto-assets (ADAN × KPMG × IPSOS 2024), 49 % of holders are CSP+. Segment-level signal — notaires « very low » (GT estimate : 5 of 17,000 autonomous on a Bitcoin case), chartered accountants « low with emerging pockets », CGP « very low » (structural), bank retail « near zero » (Elodie, AS convergent), PSAN practitioners « high by occupation ». Lawyers and family offices : undocumented. Full table and limitations in Bitcoin Literacy and Market State.

Five kill criteria — posed before interviews, tested against field signal in Part B. (KC-1) Professionals lack Bitcoin training and feel the gap as a problem. **(KC-2)** Employers are prepared to fund. **(KC-3)** MiCA creates 2025-2026 training urgency. **(KC-4)** The Bitcoin-only positioning is credible in B2B. **(KC-5)** A B2B buyer will pay without Qualiopi. Field verdict in Part B.

B · What fieldwork revealed

The casting — eight field interviews

Eight practitioners interviewed in person or videoconference between 07/04 and 14/04/2026. Each brought a specific signal.

#	Interviewee	Role	Signature quote
1	**Gwendal Texier (GT)**	Notary at Liffré · INAN founder · Le Coffre co-founder	*« 5 out of 17,000 notaries are fully autonomous on a Bitcoin case. »*
2	**Nicolas Cantu (NC)**	4NK Academy founder (Qualiopi + RNCP) · Le Coffre co-founder	*« Education follows need — it does not create demand. »*
3	**Alexandre Stachtchenko (AS)**	INBi founder · ex-KPMG blockchain · ex-Paymium	*« Whenever 'Bitcoin' was mentioned, it got difficult. »*
4	**MD (anonymised)**	Digital Assets · BNP Paribas	*« Bitcoin is Phase 3 on the bank roadmap, not Phase 1. »*
5	**Elodie (anonymised)**	AFS / Arkea	*« I don't know MiCA, OPCO, Bitcoin ETFs. No client demand. »*
6	**Louis-Alexandre de Froissard (LAF)**	Independent wealth advisor · Bitcoiner · AUREP instructor	*« CGPs are the hardest target there is. »*
7	**Julien Oréal (JO)**	Sole-practitioner accountant	*« Bitcoin is the natural entry point into crypto-assets. »*
8	**Aurore Galves (AG)**	Gallion founder · ex-Bitcoin Lyon (PSAN) · ex-Leonod	*« We wrote our own Art. 81 procedure. No training market. »*

Three reversals

CGP ↓, Notaires ↑. Desk ranked CGP #1 (33/40) ; field, led by LAF as a pair-expert, reversed it : *« CGPs are the hardest target there is. The commission model structurally blocks Bitcoin interest. »* Confirmed by AS and by DB's own conversion history. The active MiCA sub-segment collapses to roughly five addressable advisors — quantitatively marginal. Notaries moved up (+2 from the desk). GT : *« 5 out of 17,000 »* (0.03 % autonomous on Bitcoin). LAF, having trained 20 notaires himself : *« Open posture, few preconceptions. »* Result : CGP → rank 4 (25/40) · Notaires → rank 1 (28/40).

PSAN / CASP out of the Top 5. Desk rank 3 (29/40) on the back of Art. 81 MiCA. AG, former PSAN founder : *« We wrote Art. 81 ourselves, validated by a lawyer. The real barrier is the 20-30 % cybersecurity audit, not training. »* AS converges : *« They hire internally and lean on law firms. No real training market. »* Market in contraction (PSAN without CASP file by 31/03/2026 are winding down). Result : PSAN → rank 7 (17/40). Out of direct GTM scope. Residual role : Bitcoin module within a partner provider's curriculum.

Banks deferred, not rejected. Desk rank 4 (28/40) ; field deferred on timing, not on the segment itself. MD : *« Banks focus on digital assets. That doesn't mean Bitcoin. Bitcoin is Phase 3. »* AS : *« No Bitcoin demand. »* Elodie : *« No client demand. »* DRH catalog lock named explicitly by MD. Horizon : 2-3 years, via a B2B2B model (a referenced provider in the DRH catalog). Result : Banks → rank 6 (23/40), out of short-term priority.

Bitcoin-only thesis, recast

The Bitcoin-only positioning defines **the offer, not the target**. Rogzy reframed the question — not « does this professional only use Bitcoin ? » but « does a dedicated Bitcoin module have standalone value for this professional ? ». Standalone value validated for notaires (Bitcoin dominates inheritance cases), chartered accountants (Bitcoin-specific tax and accounting obligations), PSAN-Bitcoin-only (module within Art. 81 curricula of partners). Disqualified for banks (Phase 1 blockchain fundamentals still needed) and for CGP (commission-structure friction). DB positions itself as the **Bitcoin reference module** inside broader professional curricula, not as a generalist crypto catalog.

Kill criteria verdict

#	Kill criterion	Field verdict
KC-1	Pros lack Bitcoin training and feel the gap	✅ Factually confirmed · ⚠️ felt as urgency only by notaires
KC-2	Employers fund B2B training	❌ Invalid as structural demand · ⚠️ one-shot possible via network
KC-3	MiCA creates 2025-2026 training urgency	⚠️ Partial (~5 CGP) · ❌ invalid elsewhere
KC-4	Bitcoin-only is credible in B2B	⚠️ Partial · ✅ Notaires, EC, PSAN-BTC-only · ❌ Banks, CGP
KC-5	B2B buyer pays without Qualiopi	✅ One-shot · ❌ not scalable · ❌ blocked in large orgs

Final scoring and priority segments

Post-revision Top 5 : (1) **Notaires 28/40** · (2) **Chartered accountants 27/40** · (3) Lawyers 26/40 (desk only, no Phase A interview) · (4) CGP 25/40 · (5) Family offices 25/40 (desk only, no Phase A interview). Banks and PSAN exit the Top 5.

> ### Selected priority segments : Notaires · Chartered accountants
>
> Only two segments in the post-field Top 5 show convergent favourable field signals. Selection criteria : convergent practitioner signal · autonomous decision cycle (1–3 months) · documented regulatory trigger (DAC8 · ANC 2026-01) · Bitcoin-only alignment confirmed · funding channels accessible (OPCO ATLAS via Qualiopi partner · FIFPL for libéraux · own cabinet budget short-term).
>
> *Lawyers and family offices : medium-term priority — no Phase A interviews, warrant investigation post-delivery.*

Full casting, reversal citations, kill criteria verdict and segment rationale in What Fieldwork Revealed.

C · The competitive white space

Landscape — notaires. Six categories of players occupy the French landscape for crypto-related notarial training :

- **Experts & Cryptos** — volume leader (700+ notaries trained in four months, S1 2026) · 45-minute free webinar format · active in Toulouse and Lyon chambers.
- **INFN and INAFON** — national institutional channels · multi-crypto via external speakers · half- or full-day slots.
- **Parcours Office Alpes-Maritimes** (Chambre 06 + EDHEC + INAFON) — 56-hour certifying track · geographically restricted.
- **Revue Fiduciaire Formations** — multi-professional one-day track.
- **Peer networks** (Gwendal Texier, INAN, Thomas Pezzetti, BTC Touch Point) — Bitcoin-only in practice but never in published catalog.

Landscape — chartered accountants. Four categories occupy the French landscape :

- **Force Patrimoine × Expert Crypto** — moved to the front of ANC 2026-01 alignment since their site update on 23/03/2026 · 3-day distance course at €1,475 ex. VAT + 72 €/month SaaS + delegated accounting service.
- **Revue Fiduciaire** and **Lefebvre Dalloz** — one-day multi-crypto tracks.
- **OPCO ATLAS / campusAtlas** — institutional pathway for branch IDCC 787's 138,400 salaried accountants · 2027 catalog call open (T2-T3 2026 deadline).

Condensed competitor matrix — 13 criteria × 5 actors. Applied to the two segments, the matrix confirms two structural whitespaces :

Criterion	DB (target)	Experts & Cryptos	Force Patrimoine × Expert Crypto	Revue Fiduciaire	Institutional N (INFN / INAFON)
Bitcoin-only frontal catalog	✅	❌	❌	❌	❌
DAC8 frontal and explicit	✅	❌	❌	⚠️	❌
ANC 2026-01 Bitcoin-only + cabinet depth (EC)	✅	—	⚠️ (multi-crypto)	⚠️	—
Qualiopi (via partner 4NK Academy)	✅	❓	✅	✅	✅
1-2 day structured catalog format	✅	⚠️ 45 min	❌ 3 days	✅	⚠️ fragmented
Local chamber channel — off Toulouse/Lyon	✅	✅ (T/L)	—	—	—
Bitcoin-native product coupling (Le Coffre)	✅	❌	⚠️ multi-crypto SaaS	❌	❌
Practitioner co-construction (GT, LAF)	✅	❌	⚠️	—	—

Gap verdict — notaries (9 / 9). The combination of Bitcoin-only positioning + frontal DAC8 coverage + a short 1-2 day catalog format + Qualiopi via 4NK Academy + dual channel (INFN/INAFON via Gwendal Texier and direct chambers outside Experts & Cryptos zones) is covered by no mapped actor.

Gap verdict — chartered accountants (10 exclusive / 1 shared). Ten criteria remain exclusive to DB. The ANC 2026-01 angle became shared on 23/03/2026 with Force Patrimoine × Expert Crypto, who cover it multi-crypto at distance ; DB differentiates on Bitcoin-only positioning and cabinet depth rather than on the angle itself. The frontal DAC8 coverage remains exclusive to DB across the five Direct Challengers mapped.

Reading the matrix. Across the 13 criteria × 5 actors studied, no competitor fills more than 6 DB-target positions simultaneously. Force Patrimoine × Expert Crypto is the closest Direct Challenger on the chartered-accountant side (Qualiopi, ANC 2026-01 alignment, one structured format) but remains multi-crypto, distance-only, and without Bitcoin-native product coupling. Experts & Cryptos dominates notary volume but lacks Qualiopi, catalog depth, frontal DAC8 anchoring and practitioner co-construction. The combinatorial gap — Bitcoin-only + frontal DAC8 + Qualiopi via 4NK + Le Coffre coupling + practitioner co-construction + dual channel — is what makes the white space defensible for 12 to 18 months.

Competitive tempo — a fast-closing window. Three public signals confirm the 6-12 month window is operational, not theoretical. First, **Experts & Cryptos** expanded from Toulouse-only (early 2026) to Lyon (Ain / Loire / Rhône interdepartmental chamber) and entered Paris via the ADER conference (April 2026) — the brand is scaling chambers at roughly one new zone per quarter. Second, **Force Patrimoine × Expert Crypto** shifted from generic crypto training to a frontal ANC 2026-01 positioning with a dated site update (23/03/2026) and a certified 3-day course — an active structuring of the chartered-accountant market. Third, **Revue Fiduciaire** upgraded its multi-professional Conseil parcours to include an explicit DAC8 mention in marketing materials, signalling that regulatory anchoring is becoming table stakes. The incumbent field is tightening : DB's window to establish frontal DAC8 + Bitcoin-only + 4NK Qualiopi partnership closes within 2-3 quarters if no entry move is made.

Unified cross-segment positioning. *« Bitcoin pour notaires et experts-comptables. Ancré métier, certifié Qualiopi, couplé outil. »* The five structural differentiators underpinning this positioning are listed in The 12-Month Path § D.1 — each maps to an exclusive axis of the gap analysis above.

Entry window — 6 to 12 months on both segments. Minimum execution to prove entry : two P0 partnerships signed and one chamber activated by Q4 2026. Full gap analysis and matrix in Competitive White Space.

D · The 12-month path

D.1 Positioning

Tagline : *« Bitcoin pour notaires et experts-comptables. Ancré métier, certifié Qualiopi, couplé outil. »* Four-beat structure — positioning (Bitcoin) · target (notaires and chartered accountants) · metier anchoring · proof points (Qualiopi via partner, coupling with Le Coffre). Segment declensions : *« La formation Bitcoin du notaire. Succession, donation, DAC8 — conçue avec un notaire praticien. »* | *« La formation Bitcoin de l'expert-comptable. ANC 2026-01, DAC8, LCB-FT — pour sécuriser vos missions cabinet. »*

Five structural differentiators stand behind the claim : (1) frontal Bitcoin-only catalog positioning (none mapped among 27+ competitors) · (2) DAC8 explicit and depth-first (0 / 5 Direct Challengers EC and 0 / 22 notarial actors aligned frontally) · (3) ANC 2026-01 Bitcoin-only with cabinet depth (shared with Force Patrimoine × Expert Crypto since 23/03/2026, but multi-crypto rather than Bitcoin-only) · (4) Qualiopi access via 4NK Academy (sole RNCP blockchain level 6 in Europe) · (5) product coupling with Le Coffre (Bitcoin-native documentary anchoring service, cross-segment extension confirmed by Nicolas Cantu on 20/04/2026).

Ten anticipated objections are pre-answered, each with a fact-based response. Tone is « O-C factual » — no named attack on competitors, differentiation through verifiable claims. Three operational stories anchor the sales conversation : **S1 Bitcoin inheritance** (notary receives an inheritance with 2 BTC on a hardware wallet) · **S2 ANC 2026-01 accounting** (small practice onboarding its first crypto client) · **S3 Le Coffre cross-sell** (trained professional offering a Le Coffre documentary anchoring file to their own clients). Full content — objections, stories, tone rules — in The 12-Month Path.

D.2 Distribution stack — four layers

Layer	Partners	Role
P0 cross (blocking)	NC (4NK Academy + Le Coffre) · GT (notary-practitioner INAN) · OPCO ATLAS campusAtlas	Three pillars without which the plan collapses : Qualiopi certification, notarial metier caution, institutional channel for salaried accountants
P1 cross (caution)	LAF (cross-segment caution)	1-2 interventions/yr, DAC8 co-signature on EC publication, occasional chamber intervention
P1 segment	Thomas Pezzetti (INAN) · 5 chambers outside Toulouse / Lyon (Bretagne, Nouvelle-Aquitaine, Pays de la Loire, Grand Est, Hauts-de-France) · 3 CROEC (IDF, PACA, ARA) · 5 pro press editors (SJN, Revue du Notariat, Compta Online, La Lettre EC, Revue Fiduciaire) · target crypto EC firms for one-shot	Institutional relay, regional scale, publication diffusion, one-shot revenue
Plans B	AUREP (Qualiopi fallback via LAF) · Acadee (P2 opportunistic) · Némésis (P3 strict watch) · ComptaCrypto / Crypto Accounting SaaS (conditional watch)	Activable if a P0 fails

NC (Nicolas Cantu) consolidates two P0 pillars in a single interlocutor : 4NK Academy (Qualiopi + RNCP niveau 6 blockchain, sole titulaire in Europe) as the OF host, and Le Coffre as the cross-segment product coupling. Branding settled : *« Formation DB, Qualiopi via 4NK Academy »*. Exclusivity was not requested — NC's logic : exclusivity happens naturally when the partnership is optimal. GT (Gwendal Texier) covers the notary metier caution : co-construction of the N modules (1,500 €/day co-animation · 3-5 k€ one-shot co-author fee), maximum 5 sessions per year, Pezzetti activation via GT in a tripartite arrangement. OPCO ATLAS campusAtlas is the EC scaling channel : 2027 catalog application to be filed in Q2-Q3 2026 via the 4NK Qualiopi umbrella, target price €50–100 per participant per day (vs Force Patrimoine × Expert Crypto at €490/participant/day for a 3-day distance course).

D.3 Sequencing — four phases, gates T+3 / T+6 / T+9 / T+12

Phase	Period	Main goal	Gates evaluated
1	T+0 / T+3 (M1-M3)	Seal the three P0 cross partnerships	G1 · G2 · G3 · G7 at T+3
2	T+3 / T+6 (M4-M6)	Notary chamber pilot + start EC module	G4 · G5 · G6 (instruction) at T+6
3	T+6 / T+9 (M7-M9)	Scale N + active EC pilot + campusAtlas verdict	G3 review · G4 effective · G6 verdict at T+9
4	T+9 / T+12 (M10-M12)	Consolidation + Year 2 preparation	G8 at T+12

Main **critical path — Notaires** (0-2 week slack) : email NC + GT (S1) → framework agreement signed (S5-S6) → module N#1 produced (S7-S9) → pilot at S12 → chamber session 1 at M5 → chamber session 3 at M10 → 100-200 notaries cumulative at M12. Secondary **chartered-accountant path** (2-4 week slack) : campusAtlas application filed (S10) → libéral cabinet pilot at M6 → campusAtlas verdict at M8-M9 → collective sessions if approved, otherwise direct cabinets M10-M12.

Critical expenditures requiring MP arbitration, not a committed budget envelope : legal counsel €3–8k (M1-M3), professional liability insurance €800–1,500 / yr (mandatory before S12 pilot), INPI trademark deposit €200–500, contingent salaried reinforcement €30–60k / yr, contingent EC copywriting €3–6k. Year-1 P&L is out of scope for this report.

D.4 Pricing — dual grid

Two complementary price grids are used.

Grid	Unit	Range	Application
(a) Speaker/day	€/day speaker	€1,000 – €2,000	Institutional sessions (INFN, INAFON) · GT co-animation
(b) Participant/day	€/day/participant	€50 – €100	Group sessions of ~20 participants · catalog positioning

Grid (b) places DB 30-50 % below Force Patrimoine × Expert Crypto (€490/day/participant at 3-day distance course) while staying profitable net of 4NK retrocession (70-85 % DB share). Packaging : 2 modules × 1 day per segment (Bitcoin & Notariat fundamentals + DAC8 compliance on the N side ; ANC 2026-01 Bitcoin-only + DAC8 / LCB-FT on the EC side), optional combined pack at 10-15 % discount. Each complete participant receives a Le Coffre documentary anchoring file free of charge (50/50 split DB / Le Coffre), plus 10 % affiliate commission on downstream Le Coffre service extensions subscribed by the participant's own clients.

D.5 Qualiopi path — three horizons

Immediate : direct sale on own cabinet budget, no condition. Used for S12 pilot and libéral EC one-shot. Ticket limited, no OPCO access. **Short term** : Qualiopi access via partner 4NK Academy — framework agreement to be signed in S5-S6, 4NK is the OF host for OPCO sessions, 70-85 % retrocession to DB, branding *« Formation DB, Qualiopi via 4NK Academy »*. **This is the main path for the 12-month plan. Medium term** : own Qualiopi certification (6-18 months) — internal dossier preparation, initial audit, follow-up audit, renewal audit. Cost estimate €2,000-3,000 plus internal time. Benefit : 100 % margin + direct OPCO access + reinforced B2B credibility. **Plans B** : AUREP actionable via LAF (LAF is already an AUREP instructor) · Acadee P2 opportunistic (Qualiopi since 2019) · Némésis P3 passive monitoring only.

D.6 KPIs and volume targets

Leading KPIs — partner emails and calls per week (weekly, alert threshold < 2/week in S1-S4) · active publication drafts (monthly) · Murielle's product hours per week (overload alert > 40 h/week) · operational modules status.

Lagging KPIs — P0 partnerships signed (target : 3) · notaries trained (target : 100-200) · chartered accountants trained (target : 50-150) · N chambers activated (target : 2-3) · CROEC activated (target : 2-3) · published signature articles (target : 4) · cumulative revenue (range €26-128k) · pilot NPS (target ≥ 7) ·

prospect-to-enrollee conversion rate (target ≥ 10 % at T+6, ≥ 15 % at T+12).

Trimester trajectory :

Metric	T+3	T+6	T+9	T+12
Notaires cumulative	10-15 (pilot)	30-60	60-120	100-200
Chartered accountants cumulative	0	10-30	25-75	50-150
P0 partnerships signed	2	2-3	3	3
N chambers activated	0-1	1	2	2-3
CROEC activated	0	0-1	1	2-3
Publications submitted or published	1	2	3	4

D.7 Quick wins — short-term revenue

Five one-shot plays generate signal and learnings before OPCO-funded scale. Cumulative T+6 range : **€9,500 – €23,250 ex. VAT**, realistic median ~ €12,500.

Code	Action	Unit revenue	Timing
QW-1	Notary module #1 pilot at S12 charged (10-15 notaries)	€1,500 – €2,250	T+3
QW-2	First chamber N #1 session outside Experts & Cryptos zones (20-30 notaires in Rennes or Bordeaux)	€5,000 – €8,000	T+5
QW-3	Bi-profile EC cabinet one-shot pilot (libéral or mid-size)	€3,000 – €4,000 (libéral) · €8,000 – €10,000 (mid)	T+6
QW-4	DB × GT joint intervention at INFN or INAFON (15-30 notaries)	€1,000 – €2,000 per day	T+5 / T+6
QW-5	Le Coffre affiliate commission post-training	€0 – €1,000 cumulative	T+4 / T+6

Top 3 priorities : QW-2 (highest structural revenue per effort unit) · QW-3 (maximum ticket) · QW-1 (highest execution probability). Year-1 revenues remain modest (€26-128k cumulative nominal) — the success test is **channel opening**, not Year-1 P&L.

Full positioning content, partner fiches, weekly sequencing breakdown, pricing discussions, KPI cadence and QW details in The 12-Month Path.

E · Failure modes & constraints

Five structural constraints of Découvre Bitcoin are named upfront because they shape the sequencing of the plan, not because they disqualify it.

1. **No Qualiopi certification** — no direct access to OPCO funding today. Resolved short-term via a certified partner (4NK Academy); addressable medium-term through direct certification (6 to 18 months).
2. **No MiCA curriculum** — the PSAN / CASP opportunity via Art. 81 requires significant product investment. Field research confirms there is no external training market on this segment anyway.
3. **Brand language to refactor** — current tone is « friendly and individual », incompatible with B2B professional training, as DB itself acknowledges.
4. **No dedicated B2B budget** — all recommendations must be resourced from the Plan B Program network and Rogzy's time. No external fundraising in Year 1.
5. **No active B2B traction** — DB has given conferences, never paid ones, and has zero B2B professional conversion to date.

Top risks — rank-ordered by probability × impact.

1. Experts & Cryptos obtains Qualiopi and closes the gap.
2. Experts & Cryptos expands chambers outside Toulouse / Lyon.
3. 4NK Academy declines the module partnership.
4. DB product capacity stretched across four modules and partnerships.
5. Gwendal Texier disengages.
6. Force Patrimoine × Expert Crypto adds Bitcoin-only or DAC8 frontally.
7. The DB survey at T+12 reveals prospect wait-and-see above 50 %.

Each risk is gated and has a rehearsed plan B, detailed in Failure Modes.

Five kill criteria. The plan is invalidated if one of the five kill criteria inverts during execution :

- **KC-1** — conversion rate below 10 % at T+6 (need not felt).
- **KC-2** — zero employer-funded one-shot closed at T+6 (disproved even as opportunity).
- **KC-3** — MiCA urgency dissipates without substitute demand signal (not load-bearing on selected segments).
- **KC-4** — explicit « Bitcoin-only » frontal pushback on pilot sessions with NPS below 7 (disproved on target segments).
- **KC-5** — zero Qualiopi partnership signed and zero one-shot invoiced at T+6 (disproved both ways).

Cash and investment caveats. The B2B training sales cycle in France is structurally 3 to 6 months, with further OPCO reimbursement delay. Pilot revenue at T+3 to T+6 will therefore precede OPCO-funded scale by one to two quarters. A Year-1 P&L and gross-margin estimate are out of scope for this report and belong to DB's internal planning once T+6 gates are observed.

Annexes

The following companion files detail and extend each section of this report. Sources, methodology, glossary and scoring data are positioned here as formal appendices.

#	Annex	Content	Link
I	**Sources & Interview Index**	Primary data (8 interviews) · regulatory texts · official statistics · confidence hierarchy	Appendix_1_Sources_Index.md
II	**Methodology**	Segment-first protocol · 8-criterion scoring grid · field confidence levels · interview guide structure	Appendix_2_Methodology.md
III	**Glossary**	Technical terms · regulatory acronyms · named actors (practitioners, organisations, competitors)	Appendix_3_Glossary.md
IV	**Market Sizing & Scoring**	TAM/SAM/SOM · full pre-field and post-field scoring matrix (6 segments × 8 criteria) · Bitcoin literacy by segment	Appendix_4_Market_Sizing.md
V	**Market State**	Regulatory context (MiCA · DAC8 · ANC 2026-01) · training financing · segment-first methodology detail	A_Market_State.md
VI	**What Fieldwork Revealed**	8-interview casting · three reversals · kill criteria verdict · full post-field segment rationale	B_Terrain_Flip.md
VII	**Competitive White Space**	Full 13-criteria competitor matrix · gap analysis per segment · entry window detail	C_White_Space.md
VIII	**The 12-Month Path**	Positioning detail · partner fiches · weekly sequencing · pricing discussion · KPI cadence	D_12m_Path.md

#	Annex	Content	Link
IX	**Failure Modes**	Risk register with plan B per risk · kill criteria activation conditions · cash caveats	E_Failure_Modes.md
X	**Distribution Partners**	Detailed partner fiches — P0 / P1 / Plans B · contact info · agreement status	Appendix_5_Distribution_Partners.md
